WEEK 12 · LECTURE L3 · UNIT IV

Synthesis and End-Term Preparation

Units I to IV as one practitioner model, the comparisons the end term favors, and how to answer.

R K Singh · Senior Professor, Department of Commerce · Delhi School of Economics, University of Delhi
DSEH001 · Digital Transformation in Human Resource Systems · M.Com. PGCF 2025 · Exam preparation edition

AFTER THIS LECTURE YOU SHOULD BE ABLE TO

What this lecture prepares you for

- Integrate Units I to IV into one model: understand, build, analyze, strategize.
- Rehearse the core comparisons the end term favors.
- Understand the paper's structure and marking criteria.
- Revise effectively using retrieval, spacing and interleaving.

COURSE OUTCOMES

CLO 1 to CLO 5, integrated.

THE COURSE IN ONE MAP

Understand, build, analyze, strategize

Unit	The question	Core ideas
I · Weeks 1 to 3	Where are we, and why must we change?	Drivers; maturity models; data literacy; ethics of adoption
II · Weeks 4 to 6	What do we build, and will people use it?	HRIS and integration; ATS; onboarding; LMS; UTAUT and adoption
III · Weeks 7 to 9	What do the data say, and are our tools fair?	Analytics ladder; KPIs and dashboards; fairness audits and definitions
IV · Weeks 10 to 12	What future do we design?	Gig and hybrid work; automation; strategy; HR as change agent

COMPARISONS

The contrasts the end term favors

Comparison	The heart of it
Suite versus best of breed	One data model versus the best tool per module and a connector for every pair
Descriptive versus predictive	What happened versus what is likely; prediction needs clean history and a fairness check
Competing fairness definitions	Equal flag rates, error rates and precision cannot all hold when base rates differ
Gig versus traditional employment	Legal status, pay and security, control by algorithm, protection by law
Stage models versus capability grids	Sequence versus position; Kavanagh and Bersin versus Westerman
Occupation versus task automation estimates	47% versus 9%: the unit of analysis drives the answer

THE PAPER

Three hours, 90 marks, five questions

Criterion	Weight	What earns it
Conceptual accuracy	About 30%	Correct definitions of frameworks and tools
Application depth	About 35%	Clear reasoning applied to the case, not generic restatement
Critical analysis	About 20%	Limits, trade-offs and ethics
Integration and examples	About 15%	Links across units; Indian organizational contexts

EXAM LENS

Questions 1 to 4 carry 20 marks each (attempt one of two options); Question 5 carries 10 marks. Practice one full 20-mark answer in 30 minutes.

ANSWER STRUCTURE

How to build a 20-mark answer

Introduction

Define the concepts the question turns on; state your approach in one or two lines.

Analysis

Apply frameworks systematically; cite at least one piece of evidence per major claim.

Examples

Use Indian organizational contexts wherever possible.

Conclusion

Synthesize; give recommendations or note the limits of your argument.

THEORY IN DEPTH · ROEDIGER AND KARPICKE (2006)

Testing yourself beats rereading

THE CORE IDEA

Retrieval practice: recalling information strengthens memory more than studying it again.

HOW IT WORKS

Students who took practice tests remembered far more a week later than those who reread.

LIMITS AND CRITIQUE

It feels harder and less productive, so students underuse it.

IN PRACTICE

Close your notes and write out the four fifths method or UTAUT's four factors from memory, then check.

EXAM LENS

The best revision is self-testing, not highlighting.

THEORY IN DEPTH · CEPEDA ET AL. (2006)

Spread study over time

THE CORE IDEA

Spacing: the same study time spread over days produces longer retention than cramming.

HOW IT WORKS

The best gap grows with how long you need to remember.

LIMITS AND CRITIQUE

Optimal spacing depends on the material and the test date.

IN PRACTICE

Revise each unit three times across the weeks before the examination, not once the night before.

EXAM LENS

Plan a spaced revision calendar now.

THEORY IN DEPTH · ROHRER AND TAYLOR (2007)

Mix topics when you practice

THE CORE IDEA

Interleaving: mixing different problem types improves the ability to choose the right method.

HOW IT WORKS

Blocked practice teaches the method; interleaved practice teaches when to use it.

LIMITS AND CRITIQUE

It feels slower and more confusing at first.

IN PRACTICE

Practice mixed questions: a suite question, then a fairness question, then a gig work question.

EXAM LENS

Interleaving trains exactly what the examination tests: choosing the right framework.

THEORY IN DEPTH · ANDERSON AND KRATHWOHL (2001)

Bloom's revised taxonomy

THE CORE IDEA

Remember, understand, apply, analyze, evaluate, create.

HOW IT WORKS

Higher levels build on lower ones; the end term rewards apply, analyze and evaluate.

LIMITS AND CRITIQUE

Real thinking moves between levels rather than climbing in order.

IN PRACTICE

Defining UTAUT earns little; applying it to a case of device and literacy barriers and judging its limits earns most.

EXAM LENS

Aim every answer at the evaluate level.

CARRY THESE INTO THE EXAMINATION

Three things to remember

1. **Hold the course as one map: understand, build, analyze, strategize**
2. **Apply and evaluate; definitions alone earn little**
3. **Revise by testing yourself, spaced and mixed**

SET READINGS · FROM THE LESSON PLAN

Read for this lecture

- Comprehensive review of the core readings listed in the Lesson Plan.
- Each set reading is explained in the four Unit Readers on rksingh.tech/materials.

COMPANION

Each set reading is explained in the matching Unit Reader on rksingh.tech/materials.
