WEEK 1 · LECTURE L3 OF 3 · UNIT I

The GreenLeaf Brief and Disha Registration

Your client, the simulation, the four people every design must serve, and how to log in.

Part 1	The GreenLeaf pack: the divide, the access gap, the ATS pilot, the survey blind spot
Part 2	Six rounds, three currencies, five scoring axes
Part 3	Registration on the Disha platform; the four anchors
Part 4	Dataset rules, pod charter and deadlines
Read	GreenLeaf pack and the Data Dictionary

R K Singh · Senior Professor, Department of Commerce · Delhi School of Economics, University of Delhi · DSEH001 · M.Com. PGCF 2025

L3 · THE GREENLEAF PACK

Five patterns hidden in plain sight

A maturity gap

Corporate offices are partly digital. Stores and warehouses still run on paper and spreadsheets.

An access gap

Only 31% of staff have a company email address, but 92% carry a personal smartphone.

An unchecked tool

A vendor applicant tracking system has been piloted in one region. Nobody has checked who it screens out.

A blind survey

The annual paper engagement survey gets a 41% response and largely misses frontline and gig workers.

No consent design

Employee data is collected with no consent architecture, ahead of the DPDP Act 2023 timeline.

THE QUESTION Each pattern is a symptom. Your Round 1 job was to decide which one is the cause.

L3 · THE SIMULATION

Six rounds, one organization, one story

Round	Name	The decision
R1	The Diagnosis	How digitally mature is GreenLeaf, and where should change start?
R2	The Architecture	Which HR technology stack, in what order, within budget?
R3	The Rollout	The first adoption data is in. Scale, fix, retrain or pause?
R4	The Audit	Is the piloted hiring algorithm fair, transparent and lawful?
R5	The Story	Which metrics and dashboard should the CHRO use, without surveillance creep?
R6	The Future	Gig, hybrid and the future of work: the Board Memo

WHY ONE ORGANIZATION

A decision you make in Round 2 is tested again by the adoption data in Round 3 and the fairness audit in Round 4.

L3 · RESOURCES

Three currencies. One grant. Nothing refills.

₹6 crore

Budget

One grant for all six rounds: licenses, implementation and change management. Overspending is blocked.

100

Change Capital

Trust and goodwill. Opens at 100, ceiling 150. Disruptive moves spend it; honest communication earns it back. Below 30, resistance grows.

100

Analyst Days

One grant for the whole mandate. It never resets, so you must choose where deep analysis is worth paying for.

HOW ROUNDS ARE SCORED

Five equal axes, 4 marks each, 20 per round: Agility and Readiness, Financial Discipline, Employee Centricity, Analytical Rigor, and Equity and Compliance.

PART 3 · REGISTRATION

Joining your pod on the Disha platform

Step	What you do
1	Open disha-simulation.vercel.app in your browser.
2	Enter the DHTO pod code you were given in class.
3	Choose your name and set your own passcode. Do not share it.
4	Open the confirmation email and verify it.
5	Once all five members join, the platform assigns your first roles.

IF IT FAILS Check the pod code, then the spam folder for the email. A pod holds at most five members.

L3 · THE FOUR ANCHORS

Every design must work for all four of these people

GL-1001 Lakshmi Naidu

Store Associate, Warangal (Tier 3). Smartphone only, digital literacy 2 of 5, prefers Telugu. **Tests the digital divide.**

GL-1002 Arjun Joshi

Bronze-tier gig delivery partner, Chennai. Paid per delivery, managed by an app. **Tests gig fairness.**

GL-1003 Sunil Mehta

HR Officer, Lucknow. 17 years at GreenLeaf, worried automation will replace him. **Tests change and reskilling.**

GL-1004 Shreya Iyer

E-commerce and Digital executive, Bengaluru. Laptop based, frustrated by poor people data. **Tests enablement.**

THE RULE

A design that works only for Shreya is not a transformation. It is a convenience for the people who were already fine.

L3 · USING THE DATASET

Four rules that prevent the most common mistakes

Rule	Why it matters
Never join Gig_Workforce to Employee_Master	Gig partners are not employees. They are a legally separate population with a separate key (Partner_ID).
GL-1002 means two different rows	Arjun Joshi's row is in Gig_Workforce. The GL-1002 row in Employee_Master is a different, unrelated person.
The 1,000 rows are a sample	Employee_Master is a 1 in 8 sample of 8,000 people. Multiply sample counts by 8 for Board-level figures.
Rates, not counts	Compare shares within each group (for example, by Location_Tier), never raw totals across groups of different sizes.

WHERE TO CHECK The Data Dictionary defines every column. Read it before you compute anything.

PART 4 · POD CHARTER

Agree how your pod will work before Round 1

How you meet

When, where and how often, including online.

How you divide work

Who computes, who drafts, who checks the figures, each round.

How you decide

Discussion first; the Pod Lead submits only what the pod agreed.

How you handle problems

What happens if someone misses work. Peer evaluation will ask.

DEADLINES

Each round is open for seven days and locks when submitted. Late work cannot be added after a round closes.

Going deeper: the theory underneath the simulation

The next slides set out Rawls, personas, Simon's bounded rationality and the Balanced Scorecard: what each claims, how it works, where it breaks, and what it means at GreenLeaf.

THEORY IN DEPTH · RAWLS (1971)

Judge a design by how it treats the least advantaged

THE CORE IDEA

Behind a veil of ignorance you would not know whether you will be Shreya or Lakshmi, so you would choose fairly.

HOW IT WORKS

The difference principle: inequalities are acceptable only if they benefit the worst off.

LIMITS AND CRITIQUE

A theory of just institutions, not firms; a business also owes duties to owners and customers.

AT GREENLEAF

The four anchors are the veil made concrete. A plan is judged by what it does for Lakshmi and Arjun, not only Shreya.

THEORY IN DEPTH · COOPER (1999)

Design for specific people, not the average user

THE CORE IDEA

A persona is a precise, named user. Designing for everyone tends to fit no one.

HOW IT WORKS

Choose a few personas, write their goals and limits, and test every feature against each one.

LIMITS AND CRITIQUE

Personas can turn into stereotypes if they are not built from real data.

AT GREENLEAF

The anchors are personas drawn from the dataset: GL-1001 is a real row, with real device, language and literacy.

THEORY IN DEPTH · SIMON (1955)

Decisions are made under bounded rationality

THE CORE IDEA

People cannot weigh every option. They satisfice: they pick the first option that is good enough.

HOW IT WORKS

Limited time, information and attention force trade-offs. Scarcity makes priorities visible.

LIMITS AND CRITIQUE

Behavioral research shows predictable biases beyond simple limits, such as anchoring and overconfidence.

AT GREENLEAF

Three currencies that never refill force your pod to choose where analysis is worth its cost, as a real HR office must.

THEORY IN DEPTH · KAPLAN AND NORTON (1992)

Measure performance on more than one axis

THE CORE IDEA

Financial results alone look backward. A balanced scorecard adds customer, process and learning perspectives.

HOW IT WORKS

Each perspective has its own measures; trade-offs between them become visible to leaders.

LIMITS AND CRITIQUE

Scorecards can become box-ticking, and the measures can crowd out judgment.

AT GREENLEAF Disha's five equal axes adapt this idea: no axis can be bought at the cost of another.

BEFORE WEEK 2

Three things to carry forward, and what to read

1 · Digitization is not transformation

Moving a form onto a screen is digitization. Redesigning the process because a constraint has moved is transformation.

2 · The forces arrived together

Industry 4.0, AI and hybrid work landed on HR's desk at the same time. HR did not choose them and cannot opt out.

3 · Reach decides success

At GreenLeaf, a system that assumes a company email reaches about a third of the workforce.

READ

Westerman, Bonnet and McAfee (2014), *Leading Digital*, Chapters 1 and 2. Write 100 words on what you think good digital HR looks like; we return to it in Week 12.
