DSEH004 · PERFORMANCE MANAGEMENT AND EMPLOYEE ENGAGEMENT

What Performance Is, and Why This Course Runs on a Simulation

Week 1 · Lecture 1 · Unit II · Definitions of performance, the purpose of PM, and the learning design of the course

R K Singh
Senior Professor, Department of Commerce, Delhi School of Economics, University of Delhi

L1 · COMMIT BEFORE THEORY

Is performance something a person has, something a person does, or something a system produces?

Choose one. Every PM system you will design this semester quietly assumes one of these answers.

Campbell: performance is behavior, not results

CAMPBELL (1990)

The definition

Performance is what people do that is relevant to the goals of the organization, and that can be scaled by level of proficiency.

CAMPBELL ET AL. (1993)

Not the same as results

Sales figures or output also depend on markets, machines and colleagues. Judging a person by results alone rewards luck.

CAMPBELL ET AL. (1993)

Three determinants

Declarative knowledge, procedural knowledge and skill, and motivation: the choice to expend effort, its level, and its persistence.

If performance is behavior, a PM system must observe behavior. At 0.8 one to ones per round, who at Bharat Textiles is observing?

L1 · THREE RIVAL VIEWS

Each view of performance implies a different system

VIEW	CORE CLAIM	SYSTEM IT IMPLIES
Behavior (Campbell)	Performance is what the person does	Observe, describe and coach behavior
Outcomes (Drucker, MBO)	Performance is the objective achieved	Set objectives, measure results
System (Deming)	Most variation in results comes from the system	Improve the system; distrust individual ratings

Campbell (1990); Drucker (1954); Deming (1986)

What appraisal research learned, and what it missed

DENISI AND MURPHY (2017)

The old question

For decades research asked how to rate accurately: better scales, better formats, less rater error.

DENISI AND MURPHY (2017)

The verdict

Rating accuracy improved little, and accurate ratings did not by themselves improve performance.

DENISI AND PRITCHARD (2006)

The new question

How does the system change what people do? Appraisal only matters through motivation and development.

L1 · THE ARGUMENT OF THIS COURSE

Bharat Textiles has a manager coalition problem

Every design runs through managers

688 managers, an average Manager Quality of 3.09 out of 5, and 0.8 one to ones per round.

The test for every design

Does your design depend on managers, build them, or route around them?

A system the coalition will not carry is a system that does not exist.

The learning theory behind the design of this course

THEORY	CLAIM	WHERE YOU MEET IT
Experiential learning (Kolb)	Learning cycles through experience, reflection, concepts and experiment	Rounds, debriefs, reflection logs
Desirable difficulties (Bjork)	Effortful retrieval and struggle produce durable learning	Cold calls, quizzes, the Course Gem
Active learning (Freeman)	Students in lectures were about 1.5 times more likely to fail than in active classes	60 to 70 percent active class time

Kolb (1984); Bjork and Bjork (2011); Freeman et al. (2014)

L1 · HOW EACH WEEK RUNS

The flipped cycle

1 **Before class**
Read the assigned readings, then use the Course Gem for Socratic preparation. Arrive with a question.

2 **In class**
L1 builds theory, L2 tests it on cases, L3 is the simulation segment.

3 **After class**
Reflect, post to the forum, and apply the week's theory to your pod's live round.

Where the 120 marks come from

COMPONENT	MARKS	WHAT IT REWARDS
End Term Examination	90	Theory applied, compared and evaluated
Quizzes (5 of 2 marks)	10	Telling theories apart; select all that apply
Deliverables D1 and D2	8	Evidence based design in the portal
Individual Engagement	6	Peer evaluation, observation, reflection logs
Attendance	6	University norms

L1 · CLOSE

Write 100 words: what does good performance management look like?

Keep it. In Week 12 you will read it again and explain what changed.
