DSEH004 · PERFORMANCE MANAGEMENT AND EMPLOYEE ENGAGEMENT

Job Demands Resources and the Round 1 Diagnostic Frame

Week 2 · Lecture 3 · Unit II · The dual process model, challenge and hindrance demands, and choosing a diagnostic lens

R K Singh
Senior Professor, Department of Commerce, Delhi School of Economics, University of Delhi

L3 · COMMIT BEFORE THEORY

Bharat Textiles reports demands of 4.58 and resources of 3.01. Should HR cut demands or add resources?

Choose one and give one sentence of reasoning.

L3 · THE DUAL PROCESS MODEL

Two processes, not one scale

PROCESS	CHAIN	OUTCOME
Health impairment	High demands lead to exhaustion	Health problems, burnout
Motivational	Job resources lead to engagement	Performance, commitment

Burnout and engagement are not opposite ends of one line. Different drivers move each.

Demerouti et al. (2001); Schaufeli and Bakker (2004)

Bakker and Demerouti (2017)

Buffering

Job resources weaken the effect of demands on strain.

Coping

Resources matter most for motivation when demands are high.

Personal resources

Optimism and self efficacy work like job resources.

Spirals

Engaged people craft more resources; exhausted people create more demands.

L3 · MEASURING THE STATE

The Utrecht Work Engagement Scale

Vigor

High energy and mental resilience while working.

Dedication

Significance, enthusiasm, pride and challenge.

Absorption

Full concentration; time passes quickly.

Schaufeli et al. (2002)

Not all demands are alike

CRAWFORD, LEPINE AND RICH (2010)

Challenge demands

Workload, time pressure and responsibility were positively related to engagement.

CRAWFORD, LEPINE AND RICH (2010)

Hindrance demands

Role conflict, red tape and hassles were negatively related to engagement.

Cutting all demands could remove the challenge that engages Sales. Ask which demands, not how many.

L3 · ROUND 1 BRIEF

Choose one diagnostic lens and say what it cannot see

OPTION	THEORY IT RESTS ON
1A JD R comprehensive diagnostic	Bakker and Demerouti
1B Kahn's three conditions diagnostic	Kahn (1990)
1C SDT audit	Deci and Ryan
1D Engagement pulse and driver analysis	Gallup; Schaufeli
1E Manager quality audit	Manager as pivot

Costs and balances: the portal is the authority. Your justification must name the theory and its blind spot.

Same data, three diagnoses

LENS	READS THE 1.57 GAP AS	FIRST ACTION
JD R	Resource deficit against demands	Inject resources where demand is highest
Kahn	A sign of low availability	Ask what depletes energy and safety
SDT	Needs thwarted by control	Audit autonomy and competence support

L3 · ROUND 1 OPENS

Your pod submits through the Pod Lead. Read Deci and Ryan (2008) before Week 3.
