DSEH004 · PERFORMANCE MANAGEMENT AND EMPLOYEE ENGAGEMENT

Self Determination Theory at Work

Week 3 · Lecture 1 · Unit II · Basic needs, the motivation continuum, and the debate over rewards

R K Singh
Senior Professor, Department of Commerce, Delhi School of Economics, University of Delhi

L1 · ROUND 1 COLD CALLS

Three pods will be asked: which lens did you choose, and what can it not see?

L1 · COMMIT BEFORE THEORY

A bonus for every completed appraisal will improve the quality of appraisals at Bharat Textiles.

Agree or disagree, and name the mechanism you are assuming.

L1 · THE CORE CLAIM

Three basic psychological needs

Autonomy

Experiencing one's actions as self endorsed, not as controlled.

Competence

Feeling effective and growing in skill.

Relatedness

Feeling connected to and cared for by others.

Satisfying the needs supports autonomous motivation and wellbeing; thwarting them produces control and ill being.

Deci and Ryan (2000, 2008)

L1 · ORGANISMIC INTEGRATION

Motivation is a continuum, not two boxes

REGULATION	WHY THE PERSON ACTS	EXAMPLE AT BHARAT TEXTILES
External	To get a reward or avoid punishment	Fills the appraisal form to avoid a reminder
Introjected	To avoid guilt or protect pride	Fills it to look diligent
Identified	Values the outcome	Sees how feedback helps the team
Integrated	Fits who the person is	Coaching is part of being a manager
Intrinsic	For the activity itself	Enjoys developing people

Gagné and Deci (2005)

Do incentives undermine intrinsic motivation?

DECI, KOESTNER AND RYAN (1999)

Undermining

Expected tangible rewards contingent on doing a task reduced intrinsic motivation; verbal rewards increased it.

CAMERON AND PIERCE (1994)

The counter case

Cameron and Pierce argued the negative effects were narrow and limited to specific reward conditions.

CERASOLI, NICKLIN AND FORD (2014)

The synthesis

Intrinsic motivation better predicted quality of performance; incentives better predicted quantity.

SDT in collectivist cultures

CHIRKOV ET AL. (2003)

Autonomy is not independence

One can autonomously endorse interdependent, family or duty oriented goals.

CHIRKOV ET AL. (2003)

The finding

Autonomy related to wellbeing across very different cultures.

In Indian workplaces the question is not whether people want autonomy, but whether they endorse what they are asked to do.

The appraisal completion bonus

THEORY	PREDICTION	RISK
Agency theory	Pay aligns effort with the principal's goal	Managers complete forms, not conversations
SDT	Control shifts motivation toward external regulation	Quality falls while quantity rises
Goal setting	A clear target raises effort on the target	What is not measured is neglected

Jensen and Meckling (1976); Deci et al. (1999); Locke and Latham (2002)

L1 · APPLY

Using the dataset, which of the three needs is most under supplied at Bharat Textiles, and which columns would show it?
