DSEH004 · PERFORMANCE MANAGEMENT AND EMPLOYEE ENGAGEMENT

Designing Mentoring, Coaching and Sponsorship Programs

Week 10 · Lecture 1 · Unit IV · Formal and informal mentoring, matching, reverse mentoring and evaluating programs

R K Singh
Senior Professor, Department of Commerce, Delhi School of Economics, University of Delhi

L1 · ROUND 5 COLD CALLS

Three pods will be asked: which anchor does your Round 5 choice serve least, and why did you accept that?

L1 · COMMIT BEFORE THEORY

A formal mentoring program can reproduce what good informal mentoring does.

Agree or disagree. What is hard to assign?

What assigned mentoring loses

RAGINS AND COTTON (1999)

Informal advantage

Protégés of informal mentors received more career and psychosocial support and higher pay than protégés of formal mentors.

RAGINS, COTTON AND MILLER (2000)

Quality matters more

Satisfaction with the relationship mattered more than whether it was formal or informal.

Design for relationship quality, not for the number of pairs created.

Who should be paired with whom?

ENSHER AND MURPHY (1997)

Perceived similarity

Protégés who saw their mentors as similar reported more liking, satisfaction and support.

EQUITY

The risk

Matching on similarity alone reproduces existing networks and excludes those unlike current leaders.

DESIGN CHOICE

Voice in matching

Giving participants input into the match builds commitment to it.

Learning upward

MURPHY (2012)

The design

Junior employees mentor senior ones, often on technology or new markets.

MURPHY (2012)

What it builds

Cross generational learning and leadership skill in the junior mentor.

At Bharat Textiles, who could mentor BT 2026400 about digital quality tools, and what would he teach in return?

Kirkpatrick's four levels

LEVEL	QUESTION	CAUTION
Reaction	Did participants like it?	Weakly related to learning or transfer
Learning	Did they learn?	Tests in class differ from work
Behavior	Do they act differently at work?	Needs observation over time
Results	Did outcomes change?	Many other causes

Utility reactions, whether people found it useful, related to transfer better than enjoyment did.

Kirkpatrick (1994); Alliger et al. (1997)

L1 · RECALL THE EVIDENCE

Eby and colleagues (2008)

Small average effects

Mentoring is associated with better outcomes, but most effects are small.

KRAM (1985)

So the design question is

Which function, career or psychosocial, does each anchor need most?
