DSEH004 · PERFORMANCE MANAGEMENT AND EMPLOYEE ENGAGEMENT

Integrating Learning and Development with Performance

Week 10 · Lecture 2 · Unit IV · Transfer of training, the 70:20:10 claim, deliberate practice, spacing and competency models

R K Singh
Senior Professor, Department of Commerce, Delhi School of Economics, University of Delhi

L2 · COMMIT BEFORE THEORY

Seventy percent of learning at work happens on the job.

Where does this figure come from? Is it a finding?

Baldwin and Ford (1988)

INPUT	EXAMPLES
Trainee characteristics	Ability, motivation, personality
Training design	Principles of learning, sequencing, content
Work environment	Supervisor support, opportunity to use

Transfer was stronger with supportive environments and motivated trainees, and weaker for open skills such as leadership.

Baldwin and Ford (1988); Blume et al. (2010)

A ratio in search of evidence

MCCALL, LOMBARDO AND MORRISON (1988)

Origin

Drawn from interviews with successful executives about key developmental events.

CLARDY (2018)

Status

The ratio itself has not been established by research; it is a heuristic, not a law.

What expertise needs, and its limits

ERICSSON, KRAMPE AND TESCH RÖMER (1993)

The theory

Expert performance develops through effortful practice designed to improve, with feedback.

MACNAMARA, HAMBRICK AND OSWALD (2014)

The meta analysis

Deliberate practice explained 26 percent of performance variance in games, 21 in music, 18 in sports, 4 in education, and under 1 in professions.

Spacing and competencies

CEPEDA ET AL. (2006)

Spacing

Learning spread over time is retained far better than the same learning massed together.

CAMPION ET AL. (2011)

Competency models

Useful when tied to strategy, built from job data, and used consistently across HR.

L2 · DISCUSS

What would a capability roadmap for Bharat Textiles managers look like if transfer, spacing and supervisor support were taken seriously?
