WEEK 8 · LECTURE L3 OF 3 · UNIT III

KPI Frameworks and Data Culture

Cascading KPIs, building data literacy in HR, and comparing fairness-audit findings across pods.

Part 1 Building a KPI framework; leading indicators; cascading

Part 2 Building data literacy and a data culture in HR

Part 3 Round 4 working session: audit findings compared

Read Angrave et al. (2016)

R K Singh · Senior Professor, Department of Commerce · Delhi School of Economics, University of Delhi · DSEH001 · M.Com. PGCF 2025

PART 1 · CASCADING

A CHRO KPI must break down into actions

Level	Measure	Action it supports
CHRO	Attrition 20.6% (lagging)	Set priorities and budget
Regional HR partner	Share of staff under managers rated below 2.5: 14.3%	Choose which managers to coach
Store manager	My team's manager effectiveness score	Change how I run my team

THE RULE "Attrition 20.6%" helps nobody in a store. Pair each lagging outcome with a leading driver someone can act on.

PART 2 · WHY HR STRUGGLES WITH ANALYTICS

Four lessons, and a trap

Strategic understanding

Know how people create value in this business.

Logic-driven analytics

Rooted in how the data were collected.

Pivotal segments

Focus on the groups that matter most.

Beyond correlation

Use experiments and quasi-experiments.

THE TRAP

If HR stays out, finance models staff as a cost: staffing is cut, service falls, sales fall. InsightHR has 38 of 90 users; the analytics process has no owner.

PART 3 · WORKING SESSION

Compare audit findings across pods

Question	What to compare
What ratio did you compute?	Rates or counts; which groups; which requisitions
What did you decide?	Keep, fix, human review or switch off
Who reviews, how often, by what criteria?	Was escalation specified?
What would change your decision?	The evidence that would reverse it

THE COURSE'S HUMAN REVIEW SPECIFICATION

A real review names who reviews, the cadence, the criteria, and the escalation path.

Going deeper: the theory underneath data culture

The next slides set out Kaplan and Norton's strategy maps, Schein's levels of culture, Ajzen's theory of planned behavior, and Davenport's analytical competitors: what each claims, how it works, where it breaks, and what it means at GreenLeaf.

THEORY IN DEPTH · KAPLAN AND NORTON (2004)

Strategy maps link measures to causes

THE CORE IDEA

A strategy map draws cause-and-effect links from learning and growth to processes, customers and finance.

HOW IT WORKS

Each KPI sits on a causal chain: better managers lead to lower attrition, which leads to better service and sales.

LIMITS AND CRITIQUE

The arrows are hypotheses; firms rarely test them.

AT GREENLEAF Draw GreenLeaf's chain from manager effectiveness to store sales, then test each arrow with data.

THEORY IN DEPTH · SCHEIN (1985)

Culture has three levels

THE CORE IDEA

Artifacts (what you see), espoused values (what people say), basic assumptions (what is taken for granted).

HOW IT WORKS

Change at the artifact level, such as a new dashboard, fails if assumptions stay the same.

LIMITS AND CRITIQUE

Assumptions are hard to observe, so diagnosis relies on interpretation.

AT GREENLEAF

If store managers assume "HR data is for HR", no dashboard will change their decisions.

THEORY IN DEPTH · AJZEN (1991)

Intention to use analytics has three roots

THE CORE IDEA

The theory of planned behavior: attitude, subjective norms and perceived control predict intention.

HOW IT WORKS

People use analytics when they value it, when leaders expect it, and when they feel able to.

LIMITS AND CRITIQUE

Intentions do not always become behavior.

AT GREENLEAF

Leaders asking for the data at every review creates the norm. Training builds perceived control.

THEORY IN DEPTH · DAVENPORT AND HARRIS (2007)

Analytical competitors build it into how they decide

THE CORE IDEA

Firms that compete on analytics have senior sponsorship, enterprise-wide data, and analysis embedded in core decisions.

HOW IT WORKS

They move from local analytics to enterprise analytics over several stages.

LIMITS AND CRITIQUE

Written about large, data-rich firms; many cases later struggled.

AT GREENLEAF

GreenLeaf's first step is a named owner for people analytics with the CHRO's sponsorship.

TAKEAWAYS

Three things to carry out of this lecture

1

Cascade every KPI to a measure someone can act on.

2

Culture changes at the level of assumptions, not dashboards.

3

A real human review names who, how often, by what criteria, and the escalation.

NEXT Algorithmic decision-making in HR.
