WEEK 9 · LECTURE L3 OF 3 · UNIT III

Accountability and Round 5: The Story

Algorithmic management, human review and redress, and GL-1002 under an algorithm.

Part 1 Algorithmic management; human in the loop; audit and redress

Part 2 GL-1002 Arjun Joshi: ratings, allocation, grievance

Part 3 Round 5 brief: KPI framework, dashboard and data-culture plan

Read NITI Aayog (2022); Gratton (2021)

R K Singh · Senior Professor, Department of Commerce · Delhi School of Economics, University of Delhi · DSEH001 · M.Com. PGCF 2025

PART 1 · HUMAN IN THE LOOP

A real human review answers four questions

Who reviews

A named role with authority to overturn the algorithm.

How often

A set cadence, not only when someone complains.

By what criteria

Written standards for when to override.

Escalation

Where a disputed case goes next, and how fast.

THE COURSE'S HUMAN REVIEW SPECIFICATION

A review without these four is a rubber stamp. An explainability dashboard is not a correction.

PART 2 · GL-1002 ARJUN JOSHI

A highly rated partner in the lowest tier

Measure	Arjun Joshi	Gold tier average
Customer rating	4.81	4.36
Allocation score	34	81.6
Monthly earnings	₹11,400	₹19,014
Grievances in 6 months	5	1.1
SS2020 benefits	Not enrolled	55.2% enrolled

READ IT

His ratings are higher than the Gold average, yet the algorithm keeps him Bronze. Ratings do not explain the tier. Source: Gig_Workforce.

PART 3 · ROUND 5 BRIEF

What Round 5 asked of your pod

A KPI framework

Leading and lagging measures, each with an owner and a counter metric.

An executive dashboard

Passes the ten-second test; no dashboard theater.

A data-culture plan

Builds data literacy in HR without surveillance creep.

THE STORY A headline sentence, three metrics, one counter metric, one action.

Going deeper: the theory underneath accountability

The next slides set out procedural justice, Rosenblat and Stark on information asymmetry, Hirschman's exit and voice, and the precautionary principle: what each claims, how it works, where it breaks, and what it means at GreenLeaf.

THEORY IN DEPTH · LEVENTHAL (1980)

Fair procedures follow six rules

THE CORE IDEA

People judge fairness by the process as well as the outcome.

HOW IT WORKS

Consistency, bias suppression, accuracy, correctability, representation and ethicality.

LIMITS AND CRITIQUE

Cultures weigh the rules differently, and good process cannot fully offset bad outcomes.

AT GREENLEAF

Deactivation without appeal fails correctability. An appeal route is the cheapest fairness gain available.

THEORY IN DEPTH · ROSENBLAT AND STARK (2016)

Platforms manage through information asymmetry

THE CORE IDEA

A study of Uber drivers found the platform controls work by deciding what information drivers see.

HOW IT WORKS

Hidden rules, nudges and ratings steer behavior without a visible manager.

LIMITS AND CRITIQUE

One platform in one country; practices vary and are changing under regulation.

AT GREENLEAF

Partners are not told the allocation weights. Explaining them is the first step to fair management.

THEORY IN DEPTH · HIRSCHMAN (1970)

Exit, voice and loyalty

THE CORE IDEA

When an organization declines, members can leave (exit) or speak up (voice).

HOW IT WORKS

Where voice is blocked, exit rises. Loyalty delays exit and makes voice more likely.

LIMITS AND CRITIQUE

Gig workers often have neither cheap exit nor real voice.

AT GREENLEAF

Bronze partners churn at 32.4% and Gold at 0%. Without a grievance route, exit is the only voice left.

THEORY IN DEPTH · PRECAUTIONARY PRINCIPLE (RIO DECLARATION, 1992)

When harm is likely and benefit unproven, the burden shifts

THE CORE IDEA

Lack of full certainty should not delay action to prevent serious harm.

HOW IT WORKS

Those who want to continue a risky practice must show it is safe, not the reverse.

LIMITS AND CRITIQUE

Critics say applied strictly it can block useful innovation.

AT GREENLEAF

With a 0.60 adverse impact ratio and no proven benefit, the burden is on keeping the ATS, not on stopping it.

TAKEAWAYS

Three things to carry out of this lecture

1

Human review must name who, how often, by what criteria, and escalation.

2

High ratings did not lift Arjun out of Bronze; the algorithm needs explaining.

3

Where voice is blocked, people exit.

NEXT Unit IV: the gig and platform economy.
