WEEK 12 · LECTURE L1 OF 3 · UNIT IV

Final Pod Presentations Part 1

Defending an integrated transformation case under questioning.

Part 1	The format: 10 minutes plus 2 for questions
Part 2	What the panel will ask
Part 3	How to present and defend well
Read	No new reading; pods present

R K Singh · Senior Professor, Department of Commerce · Delhi School of Economics, University of Delhi · DSEH001 · M.Com. PGCF 2025

PART 1 · THE FORMAT

Twelve minutes to show one coherent case

Minutes	What to cover
0 to 2	The thesis: what your pod believes GreenLeaf must do, in one sentence
2 to 8	Six rounds as one story: diagnosis, architecture, rollout, audit, story, future
8 to 10	The Board ask, with full-scale figures and a stop rule
10 to 12	Questions from the panel

PART 2 · WHAT THE PANEL WILL ASK

Five questions to prepare for

Question	What a strong answer shows
Which figure would you check twice?	Honest awareness of weak evidence
What did Round 3 change in your plan?	Learning, not a fixed script
Does your plan work for Lakshmi and Arjun?	The anchors, tested
Which fairness definition did you choose?	A defended value judgment
What would make you stop?	A stop rule set in advance

Going deeper: the theory underneath presenting

The next slides set out Aristotle's rhetoric, Mayer's multimedia principles, the curse of knowledge, and steelmanning: what each claims, how it works, where it breaks, and what it means at GreenLeaf.

THEORY IN DEPTH · ARISTOTLE (RHETORIC)

Three modes of persuasion

THE CORE IDEA

Ethos (credibility of the speaker), pathos (feeling of the audience), logos (logic of the argument).

HOW IT WORKS

Strong presentations use all three: credible sources, a human case, and sound reasoning.

LIMITS AND CRITIQUE

Pathos without logos manipulates; logos without pathos rarely moves an audience.

AT GREENLEAF Lakshmi's story is pathos; your four fifths ratio is logos; your honest limits build ethos.

THEORY IN DEPTH · MAYER (2009)

Multimedia principles for slides

THE CORE IDEA

People learn better from words and pictures than words alone, if the design respects limited attention.

HOW IT WORKS

Coherence (cut extras), signaling (highlight what matters), redundancy (do not read the slide aloud), contiguity (label next to the picture).

LIMITS AND CRITIQUE

Tested mostly in short lab lessons with novices.

AT GREENLEAF One message per slide, a chart labeled directly, and you speaking, not reading.

THEORY IN DEPTH · CAMERER, LOEWENSTEIN AND WEBER (1989)

The curse of knowledge

THE CORE IDEA

Once you know something, it is hard to imagine not knowing it.

HOW IT WORKS

Experts skip steps and use jargon their audience does not share.

LIMITS AND CRITIQUE

Awareness of the bias reduces it only partly; testing on a fresh listener works better.

AT GREENLEAF

After six rounds, your pod knows the dataset. The audience does not: define every figure you show.

THEORY IN DEPTH · RAPOPORT'S RULES (DENNETT, 2013)

Steelman before you rebut

THE CORE IDEA

Restate the other side so well they would say, "I wish I had put it that way," before disagreeing.

HOW IT WORKS

Then list points of agreement and what you learned from them, and only then criticize.

LIMITS AND CRITIQUE

Takes time, which is short in a twelve-minute slot.

AT GREENLEAF

When asked why you did not choose another option, first state its strongest case. Then explain your choice.

TAKEAWAYS

Three things to carry out of this lecture

1

Tell six rounds as one story with one thesis.

2

Prepare for the five panel questions.

3

Define every figure for an audience that has not lived your data.

NEXT Part 2 of the presentations, and peer voting.
