WEEK 12 · LECTURE L3 OF 3 · UNIT IV

Synthesis and End-Term Preparation

Units I to IV as one practitioner model, the comparisons the end term favors, and how to answer.

Part 1 Integrating Units I to IV: understand, build, analyze, strategize

Part 2 End-term structure, marking pattern, revision strategy

Part 3 Sample questions worked through

Read Comprehensive review of the core readings

R K Singh · Senior Professor, Department of Commerce · Delhi School of Economics, University of Delhi · DSEH001 · M.Com. PGCF 2025

PART 1 · THE COURSE IN ONE MAP

Understand, build, analyze, strategize

Unit	The question	GreenLeaf evidence
I · Weeks 1 to 3	Where are we, and why must we change?	7 of 10 processes at level 1 or 2; 16 systems
II · Weeks 4 to 6	What do we build, and will people use it?	Two HRIS; 120 possible links; active use 0% to 100% by literacy
III · Weeks 7 to 9	What do the data say, and are our tools fair?	Offer ratio 0.60; false positive rate 70.1% against 22.7%
IV · Weeks 10 to 12	What future do we design, and how do we lead it?	300 gig partners; 33.6% hybrid-eligible; HR Officer skill gap 0.9

PART 1 · FOUR COMPARISONS

The contrasts the end term favors

Comparison	The heart of it
Suite against best of breed	One data model against the best tool per module and a connector for every pair
Descriptive against predictive	What happened against what is likely; prediction needs clean history and a fairness check
Competing fairness definitions	Equal flag rates, error rates and precision cannot all hold when base rates differ
Gig against traditional employment	Legal status, pay and security, control by algorithm or supervisor, voice

PART 2 · THE PAPER

Three hours, 90 marks, five questions

Criterion	Weight	What earns it
Conceptual accuracy	About 30%	Correct definitions of frameworks and tools
Application depth	About 35%	Clear reasoning applied to the case, not generic restatement
Critical analysis	About 20%	Limits, trade-offs and ethics
Integration and examples	About 15%	Links across units; Indian contexts

STRUCTURE

Questions 1 to 4: 20 marks each, one of two options. Question 5: 10 marks. Practice one 20-mark answer in 30 minutes.

Going deeper: the theory underneath revision

The next slides set out retrieval practice, spacing, interleaving, and Bloom's revised taxonomy: what each claims, how it works, where it breaks, and what it means at GreenLeaf.

THEORY IN DEPTH · ROEDIGER AND KARPICKE (2006)

Testing yourself beats rereading

THE CORE IDEA

Retrieval practice: recalling information strengthens memory more than studying it again.

HOW IT WORKS

Students who took practice tests remembered far more a week later than those who reread.

LIMITS AND CRITIQUE

Feels harder and less productive, so students underuse it.

AT GREENLEAF Close the notes and write the four fifths method from memory, then check.

THEORY IN DEPTH · CEPEDA ET AL. (2006)

Spread study over time

THE CORE IDEA

Spacing: the same study time spread over days produces longer retention than cramming.

HOW IT WORKS

The best gap grows with how long you need to remember.

LIMITS AND CRITIQUE

Optimal spacing depends on the material and the test date.

AT GREENLEAF

Revise each unit three times across the weeks before the exam, not once the night before.

THEORY IN DEPTH · ROHRER AND TAYLOR (2007)

Mix topics when you practice

THE CORE IDEA

Interleaving: mixing different problem types improves the ability to choose the right method.

HOW IT WORKS

Blocked practice teaches the method; interleaved practice teaches when to use it.

LIMITS AND CRITIQUE

Feels slower and more confusing at first.

AT GREENLEAF

Practice mixed questions: a suite question, then a fairness question, then a gig question.

THEORY IN DEPTH · ANDERSON AND KRATHWOHL (2001)

Bloom's revised taxonomy

THE CORE IDEA

Remember, understand, apply, analyze, evaluate, create.

HOW IT WORKS

Higher levels build on lower ones; the end term rewards apply, analyze and evaluate.

LIMITS AND CRITIQUE

Real thinking moves between levels rather than climbing in order.

AT GREENLEAF

Defining UTAUT earns little. Applying it to GreenLeaf's device data and judging its limits earns most.

TAKEAWAYS

Three things to carry out of this lecture

1

Hold the course as one map: understand, build, analyze, strategize.

2

Apply and evaluate; definitions alone earn little.

3

Revise by testing yourself, spaced and mixed.

NEXT Independent revision, as per the University schedule.
